

Professional Summary

Roblox Software Engineer with 6+ years of experience building multiplayer gameplay systems and live-operated experiences. Shipped branded Roblox experiences for Warner Bros., Netflix, and Samsung, contributing to gameplay systems, matchmaking, telemetry pipelines (PlayFab/Kusto), live events, and in-game economies. Comfortable iterating weekly with live data to improve retention, stability, and player experience. Available for EST hours.

Technical Skills

- **Roblox & live-ops:** Luau (Roblox Lua), Roblox Studio, Rojo, Knit, PlayFab (Data/Kusto), telemetry instrumentation, economy, quests, inventory, matchmaking, Photon, multiplayer netcode
- **Languages & Engines:** C#, Unity, C++, Python, JavaScript, SQL, Cocos2D
- **Tooling:** Git, CI/CD, issue tracking (Jira/Trello)
- **Soft Skills:** Ownership, fast learning, cross-disciplinary collaboration, fluent in English and Portuguese
- **Currently studying:** Backend services (AWS, Go); Analytics pipelines (Snowflake, Tableau)

Professional Experience

Game Developer — Kokku Games

May 2020 to February 2025

Developed and maintained branded multiplayer games and immersive Roblox experiences for major IPs under tight deadlines.

Key Contributions:

- **Wonder Woman: Themyscira Experience (61M+ lifetime visits)** – Designed and implemented core gameplay systems including teleportation, quests, inventory, collectibles, combat encounters, and four multiplayer minigames. Supported live stability through extensive bug investigation, QA validation, and gameplay flow improvements.
- **Stranger Things: Starcourt Mall (42M+ lifetime visits)** – Developed NPC pathfinding systems, lobby/matchmaking flows, Demogorgon gameplay behaviors, and PlayFab/Kusto telemetry pipelines. Diagnosed a **70%** player loss during cross-place teleportation and redesigned the multiplayer flow using reserved-server queueing, reducing player loss to **under 5%**.
- **Samsung Space Tycoon (16M+ lifetime visits)** – Led implementation of reward and progression systems, quests, NPC behaviors, FTUE flows, minigames, PlayFab

integrations, and analytics instrumentation. Collaborated closely with design and production teams to iterate on player-facing systems in a live-service environment.

- **Icon / Club Blox** – Developed player-facing social/music interaction systems including the DIY Music Experience feature, while supporting live operations through gameplay fixes and stability improvements.
- **Confidential Projects** – Built scalable gameplay and multiplayer systems including disguise mechanics, stealth camera detection, lobby systems, persistence flows, matchmaking logic, and client-server gameplay architecture for unreleased Roblox experiences.
- **Team Support & Mentorship (2021–2025)** – Served as a technical reference for multiplayer architecture, PlayFab integrations, and gameplay system design across multiple projects. Mentored junior developers and created structured onboarding documentation + sponsored Udemy courses, reducing new hire ramp-up from 4 weeks to 1-2 weeks.

Game Development Intern — Manifesto Games Studio

October 2018 to October 2019

- **Digiworld by Red Balloon** – Collaborated with the team on the development of 2D games using Cocos2D. Wrote gameplay logic in JavaScript and helped test and debug game builds. Interacted with clients to resolve bugs and verify builds for release.

Independent Projects

Mauari: Every Seed Counts (2023)

Programmer / Gameplay Developer

Developed for the **Beetle Jam** game jam. Recognized with awards from **Unity for Humanity**, **UNESCO**, and selected by **FAAP** (São Paulo) and **Games for Change Latin America**.
